

## Imprinted CDs & DVDs

Custom Silk Screen printing has been the standard of optical disc decoration since its inception. Screen printing lends itself to high color density that results in bright, vibrant colors. Discs can be printed using 4 color process inks (we use SWOP standards), or with the Pantone Matching System, the industry standard for spot color printing. Ink jet printing and paper labels let you customize, but they are tedious, time consuming, and expensive. Custom Silk Screen Printed CDs and DVDs are the definitive standard of quality and durability by which all other print methods are measured.

Your business identity is one of the most important assets you have. Liberty's world class disc printing gives you branded recordable media that precisely matches your corporate brand. So when your clients get a disc from you, it retains and reinforces your company image. At Liberty, we work with large businesses, small companies, and individuals alike. Everybody's job is treated with the same attention to quality and detail, no matter who you are. We will work with you to get you the best-looking CDs and DVDs, at the right price.

- High Quality Image: Silk screening is the standard printing process for most commercially made discs.
- Edge to Edge Printing: The image can be printed from edge to edge - including printing on the hub.
- Extremely Durable: The image is thermally bonded to the disc surface so it will not fade, bleed or be easily scratched or damaged.
